

Developing the Capacity of Environmental NGOs through Transfer of Best Practices from NGOs in the EU15

The project had as prime aim to raise the capacity of the Romanian environmental NGO "Grupul Ecologic de Colaborare (GEC)" by transfer of experience from the Hellenic NGO "Nomos + Physis" through information and expertise exchange. The GEC personnel attended a number of seminars for building efficient capacity organised by the scientific collaborators at the premises of "Nomos + Physis". The project included also visit to the Museum of National History in Athens, as an excellent example of the wide spectrum of activities carried out by an environmental foundation.
